

Onboarding Questionnaire

Niva Medical Clinic · Submitted 27/08/2026

Clinic Basics

1. What is the full, legal name of your company?

Niva Medical Clinic Ltd

2. What is the complete address for your main clinic?

12 Buckingham Parade, The Broadway
Stanmore
HA7 4EB

3. What is your Doctor Registration Number?

GMC: 7284456

4. When did your clinic officially open?

2024-11-04

Clinic and Patient Value

1. What problems do you help solve for your patients/clients?

We help patients overcome the common barriers they face when trying to access timely, personalised healthcare. Many patients struggle to obtain a convenient GP appointment, feel rushed during short consultations, experience fragmented care, or want more time to discuss their health concerns properly.

Niva Medical Clinic provides accessible, patient-centred private healthcare with same-day face-to-face and remote GP appointments, longer consultations and a strong emphasis on continuity of care. We aim to give patients the time to be listened to, understand the cause of their symptoms and leave with a clear plan for investigation, treatment or onward referral.

We also help patients who:

Want convenient access to an experienced GP around work, family or other commitments, including weekday evenings and Saturdays.

Need prompt assessment of new or ongoing symptoms, prescriptions, referrals, blood tests, diagnostics or second opinions.

Want a more proactive approach to their health through health checks, screening and early identification of risk factors such as high blood pressure, raised cholesterol, pre-diabetes and diabetes.

Need ongoing support with chronic conditions rather than treating each appointment as an isolated episode.

Are looking for specialist GP-led services including women's health and menopause, men's health and testosterone replacement therapy, medically supervised weight management, dermatology and minor surgery.

Need access to a broader multidisciplinary team, including physiotherapy and joint injections, psychology, speech and language therapy, audiology, podiatry and optometry.

Prefer continuity and a traditional family-doctor approach where their clinician gets to know them and, where appropriate, their family over time.

Want an alternative or complement to private medical insurance, with transparent self-pay fees and membership options for individuals and families.

Ultimately, we solve the problem of accessing high-quality, convenient and personalised healthcare while retaining the continuity and trusted doctor-patient relationship that many patients value.

2. How does your patient/client feel after you solve their problem?

Our patients typically feel reassured, listened to and confident that their health concerns have been taken seriously. They leave with a clearer understanding of what may be causing their symptoms, what the next steps are, and who they can turn to if they need further support.

Rather than feeling rushed, uncertain or passed between different services, we want patients to feel that they have had enough time to discuss their concerns properly and have a clear, personalised plan for investigation, treatment, follow-up or referral.

For patients using Niva Medical Clinic on an ongoing basis, the aim is to create a sense of trust and continuity. They know they have an approachable healthcare team that understands their medical history and can support them proactively, not just when they become unwell.

Ultimately, we want patients to leave feeling heard, reassured, informed and in control of their health, with confidence that high-quality medical care is readily accessible when they need it.

3. Was there any unexpected value added to your patient/client's life when they received treatment or purchased your services?

Yes. Patients often initially come to us for a single health concern or because they need convenient access to a GP, but subsequently discover the value of having an ongoing, trusted healthcare relationship.

An unexpected benefit for many patients is continuity of care. By seeing the same doctors over time, we become familiar with their medical history, priorities and, in some cases, their wider family. This can make future consultations more efficient, personalised and reassuring.

Patients also value the proactive approach to their health. A consultation for one concern can sometimes identify previously unrecognised risk factors or health issues that benefit from further investigation, monitoring or early intervention. This has encouraged some patients to take a greater interest in prevention, regular health checks and long-term wellbeing.

Another unexpected benefit is the convenience of accessing a wider range of healthcare services through one local clinic. Rather than navigating multiple providers independently, patients can access GP care, investigations and a growing multidisciplinary team, with appropriate onward referral when required.

Perhaps most importantly, many patients tell us that they value simply having the time to be listened to and knowing there is a familiar, approachable medical team they can return to when they need advice or support.

4. Can you describe the typical patient journey from first contact to post-treatment follow-up?

The patient journey at Niva Medical Clinic is designed to be simple, accessible and personalised from the first point of contact.

Patients usually discover us through Google search, online reviews, social media, local recommendations or word of mouth. They can then book an appointment online, by telephone, WhatsApp, or directly with our reception team. Where appropriate, same-day face-to-face, telephone or video appointments are available.

On arrival, patients are welcomed by our reception team before seeing an experienced clinician. Consultations are designed to give patients sufficient time to explain their concerns, discuss their medical history and undergo an appropriate clinical assessment. The clinician will explain their findings and agree a clear plan with the patient.

Depending on the patient's needs, the next steps may include treatment or a private prescription, blood tests or other investigations, referral to a specialist or allied healthcare professional, or planned monitoring and review. Where appropriate, some investigations and treatments can be provided directly at the clinic, helping to make the process more convenient and joined-up.

Following the consultation, results are reviewed and communicated to the patient, with further advice or follow-up arranged where clinically appropriate. Patients with ongoing or long-term health needs can continue to see the same clinicians, helping us build an understanding of their medical history over time.

Our aim is that the journey does not end with a single appointment. We want patients to know that they can return to a familiar local healthcare team for future concerns, preventive healthcare and ongoing support, creating the continuity associated with the traditional family-doctor relationship.

Services & Procedures

1. What are the main procedures or services you want to promote on the website? Please provide a list of relevant keywords.

The main priority should remain Private GP as the core service, with the other services built around it. For the SEO/PPC agency, I would provide the following priorities and indicative keywords:

Priority service Relevant keywords / search terms

Private GP Consultations private GP, private GP near me, private doctor near me, private GP Stanmore, private GP Harrow, private GP Edgware, same day private GP, same day doctor appointment, private doctor appointment, face to face GP appointment, private GP North West London, private GP North London

Health Checks & Screening private health check, private health screening, health MOT, full body health check, private health check London, health check Stanmore, health check Harrow, private blood tests, comprehensive blood test, preventive health screening, annual health check

Blood Tests & Diagnostics private blood test, blood test near me, private blood test Stanmore, blood test Harrow, blood test Edgware, same day blood test, private blood tests London, health screening blood tests
Weight Loss private weight loss clinic, medical weight loss clinic, weight loss doctor, weight loss clinic Stanmore, weight loss clinic Harrow, Mounjaro weight loss clinic, Wegovy weight loss clinic, GLP-1 weight loss, medically supervised weight loss

Women's Health & Menopause private menopause clinic, menopause doctor, menopause GP, menopause clinic near me, menopause clinic Stanmore, menopause clinic Harrow, women's health GP, HRT consultation, private HRT clinic, women's health clinic

Men's Health & TRT men's health clinic, testosterone replacement therapy, TRT clinic, TRT doctor, low testosterone treatment, testosterone blood test, private men's health GP, TRT clinic London, TRT clinic North West London

Dermatology & Minor Surgery private dermatologist, GP with specialist interest in dermatology, dermatology clinic, skin clinic, skin lesion removal, mole assessment, mole removal, skin tag removal, cyst removal, minor surgery clinic, cryotherapy, CryoPen treatment

MSK & Joint Care joint injection, steroid injection, cortisone injection, joint injection clinic, knee injection, shoulder injection, hyaluronic acid injection, musculoskeletal clinic, private physiotherapy, MSK specialist

Home Visits private GP home visit, private doctor home visit, doctor home visit near me, GP home visit Stanmore, GP home visit Harrow, GP home visit Edgware, private home visiting doctor, elderly GP home visit

Sexual Health private sexual health clinic, private STI test, STI testing near me, same day STI test, sexual health GP, STD testing, discreet STI testing

Membership Plans private GP membership, private doctor membership, family GP membership, private healthcare membership, GP subscription, private GP membership London, family private healthcare

Allied Health Services private psychologist, clinical psychologist, speech and language therapy, private audiologist, ear wax removal, microsuction, private podiatrist, private optometrist, dry eye clinic

Geographically, we want to build strong organic visibility around Stanmore first, while also targeting patients searching across Harrow, Edgware, Pinner, Bushey, Borehamwood, Mill Hill, Northwood, Hatch End, Wembley, Kingsbury, Elstree and the wider North West London/North London area.

2. Could you please provide pricing information for these procedures/services? (Starting prices are fine if there are multiple options.)

GP appointment 20 mins £80. 30 mins £110 (£10 extra weekends), Dermatology from £110, TRT £150, joint injections from £150, Health check from £300 (see fees section on website)

3. What has been your most popular product/service historically?

Historically, our most popular service has been private GP consultations, particularly same-day face-to-face appointments. This remains the core of Niva Medical Clinic and is often the first point of contact for new patients.

Patients commonly attend for assessment of new symptoms, ongoing health concerns, second opinions, prescriptions, referrals, blood tests and general health advice. Many patients initially come to us for a one-off GP consultation and subsequently return for follow-up care, health checks or other services within the clinic.

Health checks and blood tests have also become particularly popular, reflecting increasing patient interest in preventive healthcare and early identification of health risks. More recently, we have seen growing demand for weight management, women's health and menopause, dermatology, men's health and other specialist GP-led services.

A significant proportion of our growth has come through recommendations and word of mouth, with existing patients referring friends and family members to the clinic.

4. Are there any standout patient success stories or transformations you would like to highlight? (Before & after, with permission)

Yes. We have several patient journeys that demonstrate the value of accessible, proactive and personalised primary care, although any individual case used publicly would only be shared with appropriate patient consent and anonymisation where required.

Some of the strongest examples include patients attending for a routine health check or seemingly minor concern where testing identified previously undiagnosed conditions or significant risk factors, such as high blood pressure, diabetes or pre-diabetes, raised cholesterol, or other abnormalities. Early identification allowed us to arrange further investigation, treatment and ongoing monitoring before these issues potentially became more serious.

We have also seen meaningful improvements in patients undergoing medically supervised weight management, where treatment combined with regular clinical review and lifestyle support has resulted in significant weight loss and improvements in wider health markers and confidence.

Other examples include patients who initially attended with ongoing symptoms or concerns that they felt had not been fully resolved elsewhere. Having longer consultations, appropriate investigations and continuity with the same clinician has helped establish a diagnosis or clearer management plan and, importantly, given patients reassurance and greater confidence in managing their health.

Beyond individual clinical outcomes, one of our most important measures of success is seeing patients who first attended for a single appointment subsequently return with their partners, children or parents. For us, this demonstrates that we are achieving our aim of developing a trusted, local family-doctor relationship rather than simply providing one-off private GP appointments.

5. What are the most common questions or concerns patients have before visiting your clinic, and how do you address them?

The most common questions and concerns patients have before visiting Niva Medical Clinic include:

- * Is private GP care covered by health insurance? Coverage varies between insurers and individual policies. Some policies do not directly cover private GP consultations, while others provide an outpatient or cash allowance that allows patients to claim back some or all of the cost. Many international health insurance policies also allow patients to claim for private GP services. We encourage patients to check the terms of their individual policy and can provide appropriate receipts and documentation to support a claim where required.
- * Do I have to leave my NHS GP to use Niva Medical Clinic? No. Our service complements, rather than replaces, NHS primary care. Patients can remain fully registered with their NHS GP and use Niva when they want additional access, longer appointments, a second opinion, preventive healthcare or other private services.
- * Can a private GP refer me into the NHS? Yes, where appropriate we can write to a patient's NHS GP or make recommendations for NHS referral. The exact referral pathway can depend on the local NHS service and its referral criteria. We can also arrange private specialist referrals where patients prefer or where this is more appropriate.
- * Do you provide scans and imaging at the clinic? We do not currently perform scans such as ultrasound, X-ray, CT or MRI on site. Where imaging is clinically indicated, our doctors can refer patients to trusted local diagnostic providers and review the results as part of their ongoing care.
- * Can I get an appointment quickly? We offer same-day face-to-face and remote GP appointments subject to availability, including appointments outside traditional working hours. Patients can book online or contact our reception team directly.
- * Can you arrange blood tests and investigations? Yes. We offer a broad range of blood tests and other diagnostic investigations, either directly at the clinic or through our laboratory and diagnostic partners. Results can then be reviewed by our clinicians with appropriate advice and follow-up.

Overall, we try to make private healthcare straightforward and transparent. Our team is available before booking to answer questions about appointments, costs, insurance documentation, investigations and referral options so patients understand what to expect before attending.

Team & Expertise

1. Can you provide more information about the lead doctor/owner of the clinic? For example, share your story, education, qualifications and experiences, along with any additional training, certifications or specialised skills.

Dr Nirav Varsani is the Founder, Director, Clinical Director and Lead GP of Niva Medical Clinic. He founded the clinic with the aim of creating a modern private GP service that combines convenient access with the continuity and personal relationship traditionally associated with the family doctor. He remains actively involved in both the clinical care of patients and the strategic development of the clinic. Niva Medical Clinic is CQC registered, with Dr Varsani serving as its Registered Manager and Nominated Individual. ([Care Quality Commission][1])

Dr Varsani moved to the UK from Kenya as a teenager and completed his secondary education in Harrow before studying Medicine at the University of Leicester. He graduated in 2012 with an MB ChB with Honours/Distinction and subsequently completed postgraduate specialist training in General Practice, obtaining Membership of the Royal College of General Practitioners (MRCGP) in 2017. ([Doctify][2])

His medical training and early career included experience across a broad range of specialties, including Accident & Emergency, general medicine, surgery, paediatrics, obstetrics and gynaecology, and cardiology. This broad clinical background has contributed to his holistic approach to General Practice. ([The Medical Travel Company][3])

Alongside Niva Medical Clinic, Dr Varsani has extensive NHS primary care experience and has worked as an NHS GP Partner since 2019. His wider NHS roles have included Lead GP responsibilities for chronic disease and infection control, long-term condition leadership and triaging referrals across North Central London. ([The Medical Travel Company][3])

His particular clinical interests include chronic disease management, preventive healthcare, men's health and testosterone replacement therapy (TRT), minor surgery, and joint and soft-tissue injections. He has undertaken additional practical training in minor surgery and joint injections and has a strong interest in identifying and managing cardiovascular and metabolic risk factors before they develop into more significant health problems.

The idea behind Niva developed from his experience working within the NHS. He wanted to retain what he values most about General Practice, particularly knowing patients over time, understanding their wider circumstances and caring for multiple generations of the same family, while creating a service with greater flexibility, longer appointments and easier access. This philosophy underpins Niva's focus on proactive, personalised and relationship-based healthcare. ([Niva Medical Clinic][4])

Rather than seeking to replace NHS General Practice, Dr Varsani sees Niva as a complementary service. He continues to work within the NHS while developing Niva as an independent local clinic, with the objective of giving patients greater choice and access to healthcare while maintaining the trusted doctor-patient relationship at the heart of good General Practice.

2. Can you provide short bios for every staff member, along with images via Google Drive?

Not provided

3. What organisations, associations, or professional bodies are you or your team part of?

Our doctors and healthcare professionals are registered with and/or members of the relevant UK professional and regulatory bodies for their disciplines. These include:

- * General Medical Council (GMC) for our medical doctors
- * Royal College of General Practitioners (RCGP) for our qualified GPs
- * Care Quality Commission (CQC), with Niva Medical Clinic registered as an independent healthcare provider
- * Health and Care Professions Council (HCPC) for relevant allied healthcare professionals, including physiotherapists, podiatrists, audiologists, speech and language therapists and practitioner psychologists
- * Royal College of Speech and Language Therapists (RCSLT) for relevant speech and language therapy professionals
- * College of Optometrists for relevant optometry professionals

Individual clinicians may also hold memberships, accreditations and additional qualifications relevant to their particular areas of practice.

From a marketing perspective, we would only display professional-body logos or describe the clinic as a "member" where the specific clinician or organisation holds the appropriate membership and the relevant body's branding rules permit this.

4. Could you share what drives your passion for your profession, what inspired you to pursue the work you do today, and the unique value you offer patients as part of their care?

What drives my passion for General Practice is the opportunity to build long-term relationships with patients and their families. I have always valued the traditional family-doctor model, where a GP gets to know the patient as a person, understands their medical history and wider circumstances, and supports them through different stages of life.

My experience working in the NHS, including several years as a GP Partner, reinforced both how valuable good primary care can be and how important time, accessibility and continuity are to patients. This inspired me to establish Niva Medical Clinic. I wanted to create a service that complements NHS care while giving patients greater choice, convenient access, longer consultations and the opportunity to develop an ongoing relationship with a doctor they know and trust.

I am particularly passionate about preventive healthcare and identifying problems before they become more serious. General Practice is not simply about treating illness when it occurs. It is also about understanding risk factors, encouraging healthier lifestyles, managing long-term conditions effectively and helping patients make informed decisions about their health.

The unique value I aim to offer is a combination of broad NHS General Practice experience with a personal and approachable style of care. I want patients to feel listened to rather than rushed, to understand why investigations or treatments are being recommended, and to leave with a clear plan.

Ultimately, the most rewarding part of the work is when patients return to us, recommend the clinic to someone they care about, or bring other members of their family to see us. That trust is what we want Niva Medical Clinic to be built around.

Clinic Advantages & Brand Identity

1. What are the top 5 selling points that truly differentiate your clinic from others in your field?

1. Continuity and the family-doctor approach

We aim to build long-term relationships rather than provide purely transactional, one-off appointments. Patients can return to doctors who know their history, understand their priorities and, increasingly, care for multiple members of the same family.

2. Same-day access with longer, unhurried consultations

We offer same-day face-to-face and remote GP appointments, subject to availability, alongside weekday evening and Saturday opening. Our model gives patients the time to explain their concerns properly, feel listened to and agree a clear plan with their doctor.

3. Experienced NHS GPs with additional clinical expertise

Our GP team brings substantial NHS experience alongside additional interests and skills in areas including women's health and menopause, men's health and TRT, dermatology, minor surgery, chronic disease management, lifestyle and weight management, and joint and soft-tissue injections.

4. Comprehensive healthcare under one roof

Niva has developed beyond a traditional private GP service. Patients can access health checks, blood tests, preventive screening and a multidisciplinary team including physiotherapy, psychology, speech and language therapy, audiology, podiatry and optometry, with access to specialist and diagnostic referral networks when required.

5. Independent, local and genuinely patient-focused

We are an independently owned, CQC-registered local clinic rather than a large corporate healthcare provider. The clinic was founded and is clinically led by a practising GP who remains directly involved in patient care. Our focus is on providing a personal, approachable service that complements NHS care and gives patients greater choice, convenience and continuity.

2. If your clinic had a specific "identity" or "personality", how would you describe it? (e.g., professional, approachable, luxurious, innovative)

Niva Medical Clinic's personality is professional, approachable, personal and modern, while retaining the trusted values of the traditional family doctor.

We want the clinic to feel clinically credible and high-quality without being overly corporate, intimidating or unnecessarily luxurious. Patients should feel comfortable from the moment they contact us, with a friendly team, doctors who genuinely listen, and an environment where they feel able to discuss their concerns openly.

Our identity combines:

- * Professional and trustworthy: experienced clinicians, high clinical standards and CQC-regulated care.
- * Warm and approachable: friendly, accessible and focused on making patients feel listened to and comfortable.
- * Personal: relationship-based care with an emphasis on continuity and getting to know patients and their families.
- * Modern and convenient: easy booking, same-day appointments, remote consultations and access to a broad range of services.
- * Community-focused: an independent local clinic that wants to become a trusted healthcare partner for families in Stanmore and the surrounding areas.
- * Proactive: focused not only on treating illness, but also prevention, screening and helping patients take greater control of their long-term health.

If summarised in a few words, our desired identity would be: "Modern healthcare with the personal touch of a trusted family doctor."

3. What is your preferred branding direction for this project: maintain your existing brand identity and colour palette, refresh your current branding, or undertake a complete rebrand?

We would like to maintain and strengthen our existing brand identity rather than undertake a complete rebrand. We are happy with the Niva Medical Clinic name, logo and established colour palette, and want to retain the recognition and trust we have already built locally.

The focus should be on refining and elevating how the existing brand is presented across the website, landing pages and digital marketing. We would like a consistent, modern, clean and professional appearance that still feels warm, approachable and personal rather than overly corporate or clinical.

Our existing colour palette of dark navy (#252C3F), light blue (#75BDE9) and white (#FFFFFF) should

remain central to the brand.

We are open to recommendations around typography, imagery, page layouts, visual hierarchy and other design elements where these could improve the overall user experience, conversion rates and perceived quality of the clinic, while keeping the core Niva identity recognisable.

4. Are there specific values or messages you want every patient to take away from your clinic?

Yes. We want every patient to feel that Niva Medical Clinic provides high-quality, accessible and genuinely personal healthcare, where they are treated as an individual rather than simply the next appointment.

The key messages we want patients to take away are:

- * You will be listened to and given appropriate time to discuss your concerns.
- * Good healthcare should be personal, with continuity and the opportunity to build a trusted relationship with your doctor.
- * We are accessible and convenient, with same-day appointments where available, extended opening hours and both face-to-face and remote care.
- * Prevention is as important as treatment. We want to help patients understand their health, identify risks early and remain well, rather than only seeing them when they are unwell.
- * Private healthcare does not need to replace NHS care. Niva is designed to complement the NHS and give patients additional choice and access when they need it.
- * We are an independent, local and community-focused clinic, with experienced clinicians and high standards of care.
- * We want to look after patients over the long term and, where possible, become the trusted family doctor for multiple generations of the same family.

Ultimately, the message is that modern, convenient private healthcare can still retain the personal relationship, trust and continuity traditionally associated with a family doctor.

Patient Feedback

1. When you've asked past patients — or prospective patients who chose not to go ahead — for feedback, what do they say they appreciate most about your clinic, and what could be improved?

The feedback we receive is overwhelmingly positive, particularly around the personal nature of the service. Patients frequently tell us that they appreciate being listened to, having enough time to discuss their concerns properly, the thoroughness and approachability of our doctors, and the friendliness and helpfulness of our reception team.

Patients also value the convenience of being able to access appointments quickly, including face-to-face appointments, and having a broad range of services available through one local clinic. Continuity is another recurring theme, with patients appreciating being able to return to a doctor who already understands their history. Recommendations and word of mouth have become an important source of new patients, which we see as particularly meaningful feedback.

Where patients or prospective patients do not proceed, cost can understandably be a consideration, particularly when they are accustomed to NHS healthcare being free at the point of use. There can also be uncertainty around whether private GP appointments are covered by medical insurance and whether using a private GP affects their NHS GP registration. We need to communicate more clearly that Niva complements rather than replaces their NHS GP, and that some insurance policies, particularly international policies and those with outpatient or cash benefits, may allow patients to reclaim costs.

Areas we continue to improve include communicating our full range of services more clearly, making the patient journey from online search to booking as simple as possible, and ensuring consistent and timely communication of results and follow-up. As the clinic grows, maintaining the personal service and continuity that patients value most is particularly important to us.

2. Have there been any unforeseen benefits your patients experienced that you didn't anticipate?

Yes. One of the most significant unforeseen benefits has been the number of important health conditions identified through consultations, health checks and investigations that patients initially attended for another reason. In some cases, this has included the early identification of suspected or confirmed cancers, as well as other significant conditions and risk factors requiring prompt investigation.

Our ability to arrange investigations quickly and act on abnormal findings has sometimes allowed patients to enter the appropriate specialist pathway earlier than they might otherwise have done. For certain NHS hospitals and pathways, our clinicians can make direct urgent suspected cancer referrals through the NHS two-week-wait pathway, where the relevant referral criteria and local arrangements are met. In other circumstances, we can liaise with the patient's NHS GP or arrange an appropriate private referral.

We have also identified previously undiagnosed conditions such as hypertension, diabetes or pre-diabetes, significantly raised cholesterol and other abnormalities during routine or preventive assessments. Patients may initially attend for reassurance or a general health check but leave with an opportunity to address a potentially important health issue at an earlier stage.

This has reinforced one of the most important aspects of our approach: accessible primary care is not simply about convenience. Giving patients sufficient time, taking a thorough history, examining appropriately and having straightforward access to investigations can occasionally identify significant disease earlier and make a meaningful difference to a patient's subsequent care.

Technology, Facilities & Recognition

1. What advanced technology, equipment, or techniques does your clinic use that sets you apart?

We would not position Niva as a technology-led clinic. Our main differentiator is experienced, personalised primary care, supported by modern technology and diagnostic equipment to make care more convenient, efficient and comprehensive.

We use a secure electronic patient management system to maintain clinical records, support continuity between appointments and manage results and follow-up. Patients can access online booking and remote consultations alongside traditional face-to-face care.

Within the clinic, we offer 12-lead ECGs and access to a wide range of laboratory investigations and blood tests through our diagnostic partners. We are also looking to expand our in-house diagnostic capabilities in the future, including services such as spirometry and 24-hour ambulatory blood pressure monitoring.

Our clinical and allied healthcare team offers a range of specialist procedures and techniques, including cryotherapy for appropriate skin lesions, minor surgical procedures, joint and soft-tissue injections including corticosteroid and hyaluronic acid injections, and microsuction for earwax removal.

Where more advanced investigations such as ultrasound, X-ray, CT or MRI are required, we can refer patients to local diagnostic providers and subsequently review the results and coordinate appropriate follow-up.

Our approach is not technology for technology's sake. We aim to combine useful modern diagnostics, digital convenience and an expanding range of clinical procedures with the personal relationship, accessibility and continuity of a trusted family-doctor service.

2. Are there any recent upgrades, innovations, or improvements in your clinic that patients should know about?

Yes. Niva Medical Clinic has grown considerably since opening, and we continue to expand our services in response to what our patients and local community need.

One of the biggest developments has been the expansion from a predominantly GP-led service into a broader multidisciplinary clinic. Alongside private GP care, patients can now access services including women's health and menopause, men's health and TRT, dermatology and minor surgery, medically supervised weight management, MSK care and joint injections, psychology, speech and language therapy and audiology.

We have also developed a network of trusted local specialists and diagnostic providers, allowing our GPs to coordinate investigations, imaging and specialist referrals when these are required.

Another important development has been the introduction and refinement of our membership plans for individuals, children and families. These are designed for patients who want to use Niva more regularly, with GP appointments, preventive health checks and other benefits incorporated into a predictable monthly cost.

We continue to invest in the patient experience through online booking, remote consultations, improved communication and follow-up processes, and an expanding range of investigations and procedures available locally. We are also exploring further in-house diagnostic capabilities, including spirometry and 24-hour blood pressure monitoring.

Importantly, as we expand, our aim is not to become impersonal or overly corporate. The priority is to broaden what we can offer while maintaining the continuity, accessibility and family-doctor approach on which Niva was founded.

3. Has your clinic or team been featured in media, awards, or publications?

Global awards - Winner
E2Media awards - winner
Startup awards - London finalist
She awards - Winner (Dr Bhavika Vagani)
Global pharmaceutical and healthcare awards - Winner (best private clinic harrow)
Will share details and images/certificates of these

4. Are there any testimonials from patients, influencers, or partners that you would like to highlight?

Yes. Patient feedback is one of the strongest parts of our reputation and an important element we would like reflected across the website and marketing campaigns.

We have received over 250 Google reviews and maintain a 5-star rating across our review platforms.

Common themes in patient feedback include the friendliness and professionalism of our team, doctors taking the time to listen, thorough consultations, ease of accessing appointments, clear explanations and the overall personal experience of receiving care at Niva.

Some particularly valuable testimonials are from patients who initially attended for a single consultation but subsequently returned for further care, joined one of our membership plans, or recommended Niva to their family and friends. We would particularly like to highlight authentic reviews that demonstrate trust, continuity of care and the quality of the overall patient experience.

We have also developed relationships with local healthcare professionals, specialists and community organisations. Where appropriate permissions are available, we would be happy to feature partner testimonials or endorsements that reinforce Niva's reputation as a trusted, independent local healthcare provider.

For SEO and PPC purposes, we would like genuine patient reviews and our strong Google rating to be incorporated strategically throughout relevant service and landing pages as social proof, rather than being confined to a standalone testimonials page.

Media & Visuals

1. Can you provide photos and videos of: main doctors, staff, office/shop (indoor and outdoor), before/after images, and any other images or videos you would like to use for the new website?

Not provided

2. Can you share professional certificates, accreditations, memberships and awards, if any?

Yes will provide

Locations & Target Market

1. What are your target locations? (Please include all suburbs, if any.)

Our primary target location is Stanmore and the surrounding North West London and North London areas. As a local, community-focused clinic, our strongest SEO and PPC emphasis should initially be on patients within a practical travelling distance of the clinic, while also targeting wider London searches for selected specialist services.

Key target locations include:

- * Stanmore
- * Harrow
- * Edgware
- * Pinner
- * Hatch End
- * Bushey
- * Borehamwood
- * Elstree
- * Mill Hill
- * Northwood
- * Kingsbury
- * Queensbury
- * Wembley
- * Watford
- * Brent
- * Barnet
- * North West London
- * North London

We would also like to build visibility in St Albans, particularly with future expansion in mind.

For SEO, Stanmore should remain the strongest geographical association with the clinic, followed by high-priority surrounding areas such as Harrow and Edgware. For PPC, we would prefer geographically targeted campaigns based on realistic travel distance and patient conversion data rather than simply targeting London as a whole.

For higher-value or more specialist services, such as health checks, men's health/TRT, women's health and menopause, dermatology/minor surgery and medically supervised weight management, we would be open to targeting a wider geographical radius where search intent and likely patient willingness to travel justify it.

2. How many locations do you currently have? Do you have Google My Business listings set up for these locations?

1 location Stanmore - yes GMB listing is set up

3. Describe your ideal patient/client. Include as much detail as possible: gender, age, location, interests, and specific problems or pain points.

Our ideal patient is not defined by one particular gender or age group, as we provide care for individuals and families across different stages of life. However, our core patient demographic is typically working-age adults, approximately 30–65 years old, living or working in Stanmore, Harrow, Edgware and the surrounding North West London and North London areas.

They are generally busy professionals, business owners, parents and families who value their health but find it difficult to access healthcare at a time that fits around work and family commitments. They are willing to pay privately when they see clear value in convenience, time, continuity and quality of care, while usually remaining registered with and continuing to use their NHS GP.

Common pain points include difficulty obtaining a convenient GP appointment, wanting a face-to-face consultation, feeling rushed during previous healthcare encounters, needing more time to discuss multiple or complex concerns, wanting a second opinion, or wanting investigations and referrals arranged efficiently with clear follow-up.

Many are increasingly proactive about their health. They may be interested in preventive health checks, comprehensive blood testing, cardiovascular and metabolic risk assessment, weight management, women's health and menopause, men's health and TRT, or ongoing management of chronic conditions. Rather than waiting until they become unwell, they want to understand their health risks and take steps to remain healthy.

We also see significant demand from parents who want convenient access to a doctor for their children,

adult children arranging care for elderly parents, and families who value having a trusted local clinic that can look after several generations.

Another important patient group includes individuals with private or international medical insurance. Some may initially be unsure whether private GP care is covered, but may have outpatient or cash benefits that allow them to reclaim some or all of their costs.

Psychographically, our ideal patient values trust, accessibility, professionalism and personal service. They are not necessarily looking for a luxury or corporate healthcare experience. They want an experienced, approachable doctor who listens, explains things clearly, knows their medical history and is available when they need help.

Ultimately, our ideal patient is someone looking for more than a one-off private GP appointment. They value the opportunity to develop an ongoing relationship with a trusted local healthcare team that complements their NHS care and supports both their immediate and long-term health.

Website Features & Integration

1. Please list all the features you want to have on the new website (e.g., contact form, online booking, ebook download, quiz, live chat, etc.)

Already have most of the features mentioned, please review and advise for any additional beneficial features

2. How would you like your website to be hosted: OMD-hosted and managed, or deployed to your own hosting environment?

Own hosting

3. If you have any appointment booking software, email marketing, or SMS marketing software, please share the login details with us.

Semble, currently use leadconnector as CRM

Competitors & Market

1. Who are your 5 biggest competitors?

I would identify our five main competitors based primarily on geographical proximity, overlap in private GP services, and competition for the same Google/paid-search audience:

1. EdgCARE – Edgware. A well-established private GP/family medicine provider offering GP consultations, health checks, blood tests, home visits, women's health and family membership. Their positioning around continuity and the traditional family-doctor model overlaps closely with ours. ([radlettprivatedoctors.co.uk][1])
2. [Mayfield Clinic](https://www.mayfieldclinic.co.uk/?utm_source=chatgpt.com) – particularly their new Edgware offering, which explicitly targets patients in Stanmore, Harrow, Watford and Barnet. They compete directly for keywords such as "private GP Stanmore", "private GP Edgware" and "same day private GP", and also offer a membership model. ([mayfieldclinic.co.uk][2])
3. Dr Suhail Hussain - Private GP – Elstree/Borehamwood. A nearby established private GP service with a strong online reputation and significant overlap with our target population across Stanmore, Elstree, Borehamwood and surrounding areas.
4. Centennial Medical – Elstree/Borehamwood. A larger private medical clinic offering GP and urgent-care services and competing for patients seeking private healthcare within our wider North West London/Hertfordshire catchment.
5. Spire Bushey Private GP Surgery – Bushey. Part of the wider Spire private healthcare offering and a relevant competitor for patients from Bushey, Stanmore, Watford, Harrow and surrounding areas seeking private GP care.

There are also broader competitors such as [The Private GP Group](https://www.theprivategpgroup.co.uk/?utm_source=chatgpt.com) and central London private GP providers, particularly for SEO/PPC rather than purely geographical competition. The Private GP Group has considerable overlap in same-day GP appointments, memberships, health checks, women's health, weight management, home visits and other services. ([The Private GP Group][3])

For this SEO/PPC project, I would regard EdgCARE and Mayfield Clinic as particularly important competitors to benchmark because their positioning and target keywords overlap strongly with Niva's focus on accessible, personalised private GP care and continuity.

2. Who is the biggest brand in your niche, and what is their flagship product/service?

In the wider UK private healthcare and private GP market, Bupa is probably the biggest and most recognisable brand. It has significant national brand awareness and offers private GP services alongside diagnostics, health assessments, insurance and wider healthcare services. ([prodrelease-dr-ct.bupa.co.uk][1])

For the part of the market most relevant to Niva, I would consider Bupa Health Assessments to be one of its flagship services. These are comprehensive preventive health checks combining health risk assessment, blood testing and, depending on the package, GP review, cancer screening and ECG testing. Bupa currently markets several tiers, including Be.Motivated, Be.Reassured and Be.Ahead. ([Bupa][2])

[Bupa Health Assessments](https://www.bupa.co.uk/health/health-assessments?homepagelink=toplink&utm_source=chatgpt.com)

Bupa also has a substantial pay-as-you-go private GP offering, including face-to-face and remote appointments, same-day availability where possible, blood tests, prescriptions and specialist referrals. ([prodrelease-dr-ct.bupa.co.uk][1])

From Niva's perspective, Bupa is a useful benchmark rather than a clinic we should try to imitate. Their strengths are national scale, brand recognition, technology and breadth of services. Our opportunity is to differentiate through being independent and locally based, providing greater continuity, a more personal family-doctor relationship, convenient same-day access and the ability for patients to build an ongoing relationship with a small clinical team rather than a large corporate provider.

Community, Content & Milestones

1. Is your clinic involved in any charities or nonprofits? If yes, please list them here.

Not on a regular basis but involved ad hoc such as macmillan coffee morning, british heart foundation

2. Do you have any case studies, before/after examples, eBooks, webinars, or other content offers? If yes, please save them to our shared Google Drive.

Will share

3. Have there been any notable milestones you can share with us? This includes new product/service launches, recognition in the media, or achievements you're proud of.

There have been a number of important milestones since Niva Medical Clinic was established, particularly given how quickly the clinic has developed from a small founder-led private GP service into a multidisciplinary healthcare clinic.

Some of the milestones we are most proud of include:

Opening our doors in Stanmore in November 2024 following CQC registration in October 2024.

Growing from an initially part-time, predominantly one-doctor service into a clinic open six days a week, with a team of four GPs, administrative support and a growing multidisciplinary team of allied healthcare professionals.

Expanding beyond general private GP consultations into women's health and menopause, men's health and TRT, weight management, dermatology and minor surgery, MSK and joint injections, psychology, audiology, speech and language therapy, podiatry and optometry.

Being named Best Private Healthcare Provider 2026 – Harrow by Global Health & Pharma. The accompanying feature recognised our same-day access, continuity, preventive approach and family-doctor model.

Developing a strong online reputation, including a 5-star Google rating from nearly 250 reviews at the time of the GHP feature, alongside excellent ratings on other independent review platforms.

Introducing our private GP membership plans, designed to make regular access to private primary and preventive healthcare more affordable and predictable for individuals, couples, children and families.

Becoming a partner clinic within the Harley Street TRT network, expanding our specialist men's health and testosterone replacement service with established clinical protocols and ongoing monitoring.

Developing relationships with local specialists, diagnostic providers and other healthcare professionals so that patients can access a more joined-up pathway from initial GP assessment through to investigations and specialist care.

Approaching our two-year anniversary in November 2026, which is particularly meaningful given how much the clinic has grown in a relatively short period.

Perhaps the achievement we are most proud of, however, is the level of patient trust we have developed.

Increasingly, new patients tell us that they have come because a friend, relative or another patient recommended Niva to them. Seeing patients return, join our membership plans and bring other members of their family to the clinic is a strong indication that the relationship-based model we set out to create is working. Independent patient reviews consistently highlight being listened to, the friendliness of the team, ease of obtaining appointments and the quality of the overall experience.

As we approach our second anniversary, the next stage is to continue expanding our clinical services and geographical reach while retaining the personal, independent and community-focused character that Niva was founded on

Performance & Conversion Tracking

1. Could you please provide the booking numbers for your main procedures over the last 12 months (or at minimum, the last 6 months)? Where possible, please include the source of these bookings (e.g. Google Ads, Organic Search, Social Media, Referrals).

GP appointments - word of mouth and SEO (about 40 per week on average)

Dermatology appointments - SEO - about 5 per week

TRT appointments - 2 per month

Health check - 2-3 per month

2. Please share the number of enquiries and consultations for these procedures so we can better understand your conversion rates at each stage of the patient journey.

Not known

Disclaimer: Please note that if consultation and procedure booking data is not provided after the campaign commences, we will be unable to report accurately on ROI and revenue performance from the campaign results. In this case, campaign reporting will be based on lead volume only.

About Your SEO

1. What is your current average client/patient lifetime value?

Not known

2. Have you done SEO before? What was the result?

Yes, improved rankings for local organic SEO

About Your PPC

1. What main procedures do you want us to target on your Google Ads campaign?

Core GP services - Private GP, Dermatology, Minor Surgery, TRT, Joint injections, Women's Health

2. What is your Google Ads campaign specific goal? (e.g. 150 new leads in 3 months, 50 conversions a month, ideal cost per lead, cost per consultation, cost per procedure booking)

20-30 new bookings per week, no idea about cost per lead

3. Do you have any additional landing pages aside from your main site?

Yes multiple landing pages

Keywords & Lead Handling

1. Are you aware of any keywords related to your services that draw in patients/clients?

Yes. Based on the types of enquiries we currently receive and how patients commonly search for private healthcare, we believe the highest-intent keywords are generally service-led and location-led.

For our core GP service, important terms include: private GP near me, private doctor near me, private GP Stanmore, private GP Harrow, private GP Edgware, same day private GP, same day GP appointment, private doctor appointment, face-to-face private GP, private GP North West London and private GP North London.

Other important service-specific searches include: private blood test near me, private health check, health MOT, full health check, menopause clinic, private menopause doctor, HRT consultation, women's health clinic, weight loss clinic, Mounjaro weight loss, Wegovy weight loss, medical weight management, men's health clinic, TRT clinic, testosterone replacement therapy, low testosterone treatment, private dermatologist, skin lesion removal, mole assessment/removal, minor surgery, CryoPen/cryotherapy, joint injections, steroid injections, cortisone injections, hyaluronic acid injections, private GP home visit and doctor home visit near me.

Location is particularly important to us. We would want the agency to investigate combinations of our main services with Stanmore, Harrow, Edgware, Pinner, Bushey, Borehamwood, Elstree, Mill Hill, Northwood, Hatch End, Kingsbury, Queensbury, Wembley and surrounding North West London areas.

We also recognise that the terms patients actually use may differ from clinical terminology. For example, searches such as "full body health check", "private doctor today", "blood tests near me", "mole removal near me" or "menopause doctor near me" may have stronger commercial intent than technically precise terminology.

We would expect keyword research, existing Google Search Console data, Google Ads search-term data and competitor analysis to determine which terms have the best combination of search volume, commercial intent and conversion potential. We are particularly interested in identifying high-intent local keywords where Niva has a realistic opportunity to rank organically and compete effectively through PPC.

2. Are there any keywords we should avoid in our campaigns? (Negative keywords)

Yes. We want to minimise spend on searches from people who are unlikely to become paying patients, while being careful not to exclude relevant searches too broadly.

Likely negative keywords include:

- * free, free GP, free doctor, NHS jobs
- * jobs, vacancies, careers, salary, recruitment, internship, work experience
- * training, courses, degree, university, medical school, GP training
- * definition, meaning, Wikipedia, research, PDF, guidelines, NICE guidelines
- * DIY, home remedy, natural remedy
- * veterinary, vet, animal
- * wholesale, supplier, equipment, machine, device
- * complaints about unrelated organisations or searches clearly seeking NHS administrative services
- * overseas locations where the searcher is clearly not looking for healthcare in our catchment area

We would also want service-specific negative keyword lists. For example, our weight-management campaigns should exclude searches primarily looking to buy medication without a medical consultation, while dermatology/minor-surgery campaigns should exclude cosmetic procedures we do not provide.

However, we would not automatically exclude terms such as "NHS", "insurance", "cheap" or "cost". These could still represent valuable patients researching whether they can use Niva alongside their NHS GP, whether their insurance will reimburse them, or comparing the cost of private healthcare.

We would expect the agency to continually review actual Google Ads search-term reports and expand the negative keyword list based on irrelevant searches that are consuming budget. We would prefer this data-led approach rather than applying an overly aggressive generic negative keyword list at launch.

3. How soon do you follow up on leads?

usually immediately or within an hour

4. How many times do you follow up a potential lead until it is converted to a client/patient?

2-3 times

5. What methods have you been using to follow up a lead?

| Call back, messaging, email back

6. Do you have anyone in charge of following up and converting leads?

| Yes, operations lead

Additional Information

1. Approved procedure list (exact treatments you offer, in order of importance)

As above

2. Clinic details (locations, consultation process, booking methods)

Stanmore - online/email/whatsapp/telephone/walk in

3. Seasonal priorities (e.g. tummy tucks before summer, facial surgery before wedding season)

Not applicable

4. Please add your comprehensive main selling points here.

Our main selling points are:

* Same-day private GP access: Face-to-face, telephone and video consultations are available on the same day, subject to availability, providing convenient access when patients need medical advice.

* Longer, unhurried consultations: We give patients appropriate time to explain their concerns, ask questions and understand their options, rather than creating a rushed or transactional experience.

* Continuity and the traditional family-doctor model: A key part of our philosophy is building long-term relationships with patients and their families. Patients can return to clinicians who know their history, circumstances and healthcare priorities.

* Experienced GP-led care: Our doctors have extensive NHS General Practice experience alongside additional expertise and clinical interests including chronic disease management, women's health and menopause, men's health and TRT, dermatology, minor surgery, weight management and preventive healthcare.

* Independent and locally owned: Niva is an independent clinic founded and clinically led by a practising local GP, rather than a large corporate healthcare provider. This allows us to maintain a more personal and responsive approach.

* CQC-registered clinic: We are registered and regulated by the Care Quality Commission, providing patients with reassurance regarding clinical governance, safety and standards of care.

* Complements NHS healthcare: Patients do not need to leave or change their NHS GP. Niva is designed to work alongside NHS care, giving patients additional choice and access when they want it.

* NHS and private referral options: Where clinically appropriate, we can liaise with a patient's NHS GP and facilitate relevant NHS pathways. For certain hospitals and services, we can also make direct urgent suspected cancer referrals into NHS pathways where the relevant criteria and local arrangements permit. Private specialist referrals can also be arranged.

* Strong focus on prevention and early diagnosis: We provide health checks, blood testing and preventive screening aimed at identifying health risks and previously undiagnosed conditions at an earlier stage. Our assessments have identified significant conditions requiring further investigation, including suspected cancers, diabetes, pre-diabetes, hypertension and raised cardiovascular risk.

* Broad range of services under one roof: In addition to general private GP care, patients can access health checks, blood tests, women's health and menopause, men's health and TRT, weight management, dermatology and minor surgery, MSK care and joint injections, psychology, speech and language therapy, audiology, podiatry and optometry.

* Convenient investigations and onward care: We offer blood testing and 12-lead ECGs within the clinic and work with local diagnostic providers for ultrasound, X-ray, CT, MRI and other investigations when required. Our doctors can then help interpret results and coordinate the patient's next steps.

* Specialist procedures locally: Our team provides services including minor surgery, cryotherapy, joint and soft-tissue injections, corticosteroid and hyaluronic acid injections, and earwax microsuction.

* Extended accessibility: The clinic is open six days a week, including weekday evenings and Saturdays, making appointments easier to fit around work, school and family commitments.

* Home visits: Private GP home visits provide an additional option for patients who have difficulty attending the clinic or prefer to be assessed at home, subject to location and availability.

* Individual and family memberships: Our membership plans are designed for patients who want regular

access to private primary care and preventive healthcare at a more predictable monthly cost.

* Family healthcare across generations: We care for adults, children and older patients, allowing several generations of the same family to use one trusted local healthcare team.

* Strong patient reputation: We have built a 5-star reputation across review platforms, with more than 250 Google reviews. Patient feedback consistently highlights our doctors' approachability and thoroughness, being listened to, the friendliness of our team and the overall quality of the patient experience.

* Award-winning clinic: Niva has received external recognition and healthcare awards as the clinic has grown, providing further independent recognition of the service we are developing.

* Multidisciplinary and connected care: Our growing team of GPs and allied healthcare professionals, together with our network of specialists and diagnostic providers, allows us to provide a more joined-up patient journey.

* Transparent self-pay healthcare: Patients can access Niva without needing private medical insurance. For patients who do have insurance, some UK policies provide outpatient or cash allowances that may allow costs to be reclaimed, while many international insurance policies provide private GP benefits, depending on the individual's policy.

Ultimately, our strongest selling point is the combination of modern private healthcare access with the personal relationship of a traditional family doctor: convenient, professional and comprehensive, but still local, approachable and centred around continuity of care.
